

Download Analysis Of Musculoskeletal Disorders Among Nurses

The high prevalence of musculoskeletal disorders among nurses is thought to be due to physical work demands, as well as to work organizational factors, of which scheduling is an important component [28,30,31]. However, there is a dearth of studies on WMSDs among nurses in Nigeria. The high prevalence of musculoskeletal disorders among nurses is thought to be due to physical work demands, as well as to work organizational factors, of which scheduling is an important component [28, 30, 31]. However, there is a dearth of studies on WMSDs among nurses in Nigeria. Musculoskeletal disorders are considered as one of the most common health-related problems that can cause disability among health care workers. The aim of this study was to assess the associations between shift working and the prevalence of musculoskeletal symptoms (MSs) among nursing personnel. Musculoskeletal disorders among nurses compared with two other occupational groups H.
