Menhaden, also known as mossbunker and bunker, are forage fish of the genera *Brevoortia* and *Ethmidium*, two genera of marine fish in the family Clupeidae. Menhaden is a blend of poghaden (pogy for short) and an Algonquian word akin to Narragansett munnawhatteaûg, derived from munnohquohteau 'he fertilizes', referring to their use of the fish as fertilizer. DEC operates 12 fish hatcheries and one fish pathology laboratory. Numerous fish species are reared for stocking into more than 1,200 public waters across the state. Annual production averages 850,000 to 900,000 pounds of fish. All hatcheries are open to the public from spring through fall, and several are open year-round. Adirondack Hatchery (518-891-3358) is located about 12 miles from the ...Fish farming or pisciculture involves raising fish commercially in tanks or enclosures such as fish ponds, usually for food. It is the principal form of aquaculture, while other methods may fall under mariculture. A facility that releases juvenile fish into the wild for recreational fishing or to supplement a species' natural numbers is generally referred to as a fish hatchery.
