

Download Group B Strep Explained

What is Group B Strep? Group B Streptococcus (GBS) is a type of bacteria that can cause illness in people of all ages. In newborns, GBS is a major cause of meningitis (infection of the lining of the brain and spinal cord), pneumonia (infection of the lungs), and sepsis (infection of the blood) (CDC 1996; CDC 2005; CDC 2009). Viral: If you have been seen by a pediatrician to know that the leukocytes are elevated, that doctor should have explained that the chances are this is a viral infection that will pass on its own. But call the doctor back and ask for more information and a diagnosis. ...Read more See 1 more doctor answer Visit MAMA Academy's Mum's area for essential information on how to have a safer pregnancy, learn about pregnancy conditions and also find post natal information.
