There should also be a check valve at the cold water inlet to the water heater. The cold inlet is the bottommost fitting. The check valve is a one-way backflow preventer that allows cold water in and prevents the heated water from migrating out of the water heater back into the cold piping system. Ask Your Question. Step 2: If you don't find your answer by searching; then just fill out the form below and we will try to answer it for you. If we don't have the answer we are pretty sure one of our visitors will.
